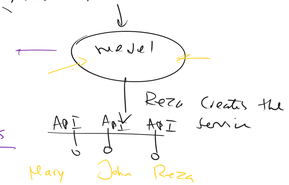
Building AI Agents in Azure

OpenAI offerings
- → personal ≡ → Should NOT upload PII
- → corporate/enterprise → Data privacy

(Read their terms-of-Service)

Azure OpenAI Model

Model Size is in GBs: 4 GBs, 60 GBs



Azure AI Foundry VS. Azure Machine Learning

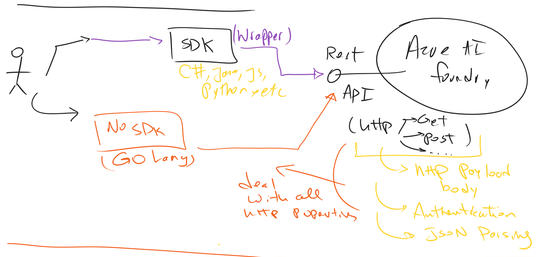
AI Scenario
- → Regression (forecasting) → how many ice-creams I will sell tomorrow if the temperature is above 40°C ?
- → clustering / classification
- → deep learning
- → (generative AI)

Azure AI foundry → Models Are Ready (Pre-Trained) (developers)

≠

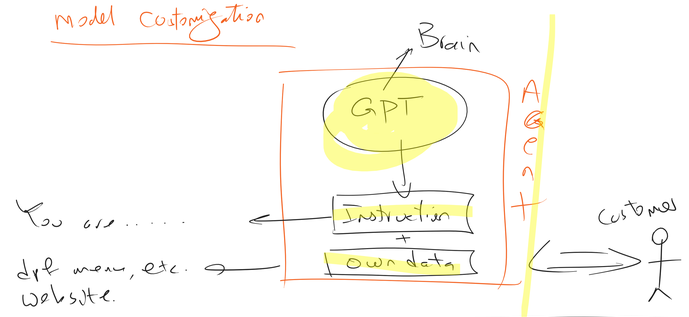
Azure Machine Learning → You will Train your own model (data scientist)

Rest Vs. SDK

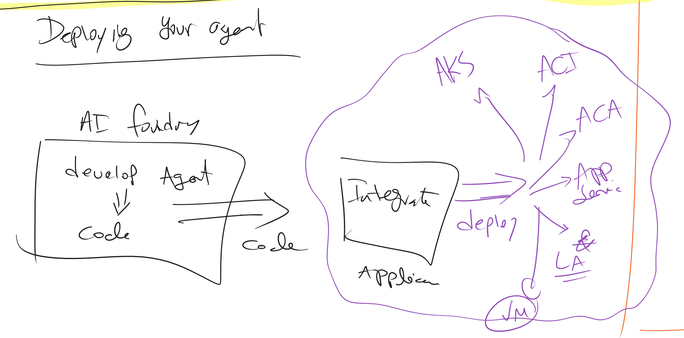


Agents
- → code → Azure AI foundry / Auto gen / Semantic Kernel } developers
- → Low-code → Microsoft Copilot Studio (Power Platform, M365)

Model Customization



Developing Agents

Agent development
- → Azure AI Agent Service (AI Foundry Agent service) (code-heavy)
- → Microsoft Copilot Studio (UI, Low-code) $ (only available to Corporate use) Power platform + M365 CAN NOT Register with Personal emails
- → other option


Deploying your agent
